

Recycling & Secure Data Destruction

When an individual or company makes the decision to upgrade their computer network, the older equipment is often restructured to work in another area of the business, sold on the secondary PC market, donated to charity or otherwise destroyed. In any of these scenarios, it is of the utmost importance that the existing data residing on the hard drives of the computers be effectively erased (sanitized). **RJR Solutions, Inc.** can help keep your information from becoming compromised with its secure recycling program.
